

Blood Pressure Monitor

Blood pressure is measured using two numbers. The first is systolic (blood pressure when your heart beats). The second is diastolic (blood pressure when your heart rests between beats).

How to take your Blood Pressure

Rest 20-30 mins before taking a measurement

Sit comfortably at a table. Rest your arm on the table

Ensure the cuff is on your upper arm in the middle

Remain still while taking a reading

Press start to begin your reading

It is normal for the cuff to feel tight

Try to take measurements at the same time each day

After you have finished taking your measurement, press the START button to turn off the power

Remove the cuff and record your reading

Attaching the arm cuff

- Wrap the cuff around the arm, about 2-3cm above the elbow. Place the cuff directly against the skin, as clothing may cause a faint pulse and result in a measurement error.
